PROFESSIONAL SUMMARY

Early Career Junior Java Developer seeking a Full time Software Engineering role in Riga. Strong foundation in object-oriented programming, databases and software testing, with hands-on coding, software documentation and application maintenance practice. Ability to apply theory in practice, supported by strong problem analysis and synthesis skills. Works with discipline and ownership, shows labour protection awareness, and cooperates well in team projects. Motivated to contribute to automation solutions, quality assurance, defect monitoring and performance problem correction while continuing self-study and professional growth.

TECHNICAL SKILLS

- **Programming:** Java, object-oriented programming (OOP), [Spring Boot], coding to quality standards, [Python / JavaScript]
- **Databases:** SQL, [MySQL / PostgreSQL], database design and basic query optimization
- **Testing and Quality Assurance:** software testing, test plans, [JUnit / Selenium], defect monitoring, performance problem correction
- **Automation and Engineering:** automation solutions, application maintenance, software documentation, software development lifecycle, Agile
- **Tools:** Git, GitHub, Maven, [IntelliJ IDEA / Eclipse], [Linux]

EXPERIENCE

[Job Title, e.g., Java Developer Intern] [Month Year] – [Month Year]
[Company Name], [City, Country]

- Developed and maintained [feature or module] in Java using object-oriented design, delivering code on time and to agreed quality standards.
- Wrote and documented software test plans and [number] test cases, supporting quality assurance and early defect monitoring.
- Applied problem analysis and synthesis to find root causes, and completed performance problem correction for [number] defects found during testing, in cooperation with the testing team.
- Worked with [SQL database] to store and query [type of data], and produced software documentation for [component].
- Followed project processes, labour protection and work discipline requirements, and kept a record of tasks in [Jira / Git].
- Carried out design, coding and application maintenance tasks under manager instructions, following project processes and company requirements, and delivered code on time and to the expected quality.

PROJECTS

[Project Name, e.g., Library Management System] [Month Year]

- Built a [console / web] application in Java with [MySQL], applying OOP principles, input validation and CRUD operations.
- Created unit tests with [JUnit] and automated [task] to reduce manual testing effort by [number]%.
- Documented the design and setup in a README, hosted the source code on GitHub, and applied theory in practice by testing the application against requirements before delivery.

[Second Project Name, e.g., Test Automation Framework] [Month Year]

- Designed [number] automated tests with [Selenium / JUnit] for [application], and analysed and synthesised problems to find root causes.
- Presented the results to [a team or instructor] and improved the solution based on feedback.

EDUCATION

[Degree, e.g., Bachelor's Degree in Computer Science or related field] [Start Year] – [End Year]
RISEBA University, Riga, Latvia
Relevant coursework: Object-Oriented Programming, Databases, Software Engineering, Software Testing, Data Structures. Applies theory in practice through projects, teamwork and continuous self-study to improve professional skills.

CERTIFICATIONS

undations , [Issuer], [Year] *(or: pursuing, expected [Month Year])*

LANGUAGES AND PROFESSIONAL SKILLS

- **Languages:** English (professional, spoken and written), [Latvian / Hindi / other]
- **Professional skills:** cooperation in team projects, self-study, professional ethics, work discipline, labour protection awareness, ability to apply theory in practice, problem analysis and synthesis, communication
